

Deluxe Two-Scene Satellite DMX Wall Station

The SSD-2 is a deluxe two-button Satellite Station designed to provide additional scene-selection points throughout a facility. Satellite Stations do not output DMX directly to lighting fixtures. Instead, they transmit the selected scene command to the connected Master Station, which then outputs DMX control data to the lighting system.

The SSD-2 is compatible with both Deluxe Master Stations and original Master Stations, including the SM-8. Each SSD-2 can be configured to recall any two scenes stored on the connected Master Station.

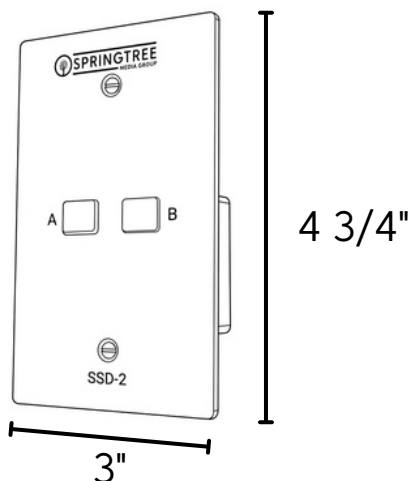

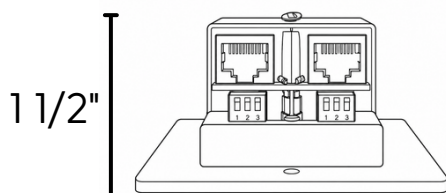

Power & Data

- Satellite Stations receive power and communication over affordable, easy-to-install Cat5/Cat6 cable.
- Each SSD-2 includes a rear output, allowing additional Satellite Stations to be connected in series.

Dimensions & Weight

- 4 3/4" L x 3" W x 1 1/2" D.
- Weight: 5 oz

Installation

Wall Stations come with a single gang low-voltage ring. They will not fit in a standard single gang box. Should you need to mount it in a metal-enclosed handy box, please use a Raco 670RAC box.
